NOTE: This is a 'working draft' sequence. It currently consists of 20 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.ht
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GISS are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      unpublished.) for Human and Mouse sequences.
Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

This sequence represents clone CL6-3' from a novel multiple sclerosis related virus type 1 (MSRV1). The sequence can be used in diagnostic, prophylactic or therapeutic compositions to inhibit expression of a multiple sclerosis related virus and/or virus associated with rheumatoid polyarthritis. (Updated on 27-AUG-2003 to correct OS field.) (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CCCTGTATCTTTAACCTCCTTGTTAAGTTTGTCTTCCAGAATCAAAACTGTAAAACTA

l pol gene, gag gene and env gene, and polypeptides encoded by these genes. The invention also provides antibodies raised against the polypeptides. The genomic sequences, polypeptides and antibodies are also claimed useful for diagnosing infection by MS and rheumatoid arthritisassociated viruses, and also for prevention and treatment of infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   360

pol, gag or reverse transcriptase genes (or their fragments) encoding the proteins or defined peptides (including immunodominant peptides.)

C antigenia peptides or conserved motifs) Also included are a process for detecting a virus associated with multiple sclerosis or rheumatoid arthritis, a prime for the amplification by polymerisation of a nucleic acid of a viral material associated with multiple sclerosis or rheumatoid arthritis, a primer for the amplification by polymerisation of a nucleic acid of a viral material associated with multiple sclerosis or rheumatoid or viral material associated with multiple sclerosis or rheumatoid or arthritis, a polypeptide exhibiting an inhibitory activity on the protecolytic, reverse transcriptase or ribonuclease H activity from MSRV, and an antibody directed against the MSRV-1 virus obtained by communogenic agent consisting of the antigenic polypeptide defined above. The nucleic acids are useful for detecting a biological sample a virus associated with multiple sclerosis or rheumatoid arthritis. The present sequence is a claimed MSRV-associated sequence whose identity cannot be accurately determined. Note: The SEQ ID numbers for the sequences as displayed in the main body of the patent do not match the SEQ ID numbers of the present of the sequence of the sequence of the consequently those sequences manifoled in the main body or consequently those sequences manifoled in the main body or the patent do not match the SEQ ID numbers of the present of the sequence of the seq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     sequence listing. Consequently those sequences mentione may not be the sequences the authors intended to claim.

```
The present sequence represents the nucleotide sequence corresponding to the 3' env region and long terminal repeat sequences from clone CL6 of Multiple Sclerosis retrovirus (MSRv-1). The specification describes a long terminal repeat (LTR)-RUS region which encodes the expression of MSRv-1 protein. This is unusual for LTRs, in particular in the RUS region. The sequence includes CAAT and TATA signals which are present in the U3 and R regions and are not directed towards the CDS indicated in the features table. Probes and antibodies to the MSRV-1 retrovirus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            protein and encoding polynucleotide sequences are used to detect the presence of MSRV-1 retrovirus in a biological sample. useful for screening modulators useful for treating or preventing useful for screening modulators useful for treating or preventing disorders associated with abnormal expression of EMBRY. The disorders treated include reproductive disorders such as infertility, endometriosis, endometrial or ovarian tumour; autoimmune/inflammatory disorder such as acquired immune deficiency syndrome (AIDS), allergies, contact dermatitis; disorders of the placenta such as preeclampsia, abruptic placentae etc. Sequences of the invention are also useful for analysing a proteome of a tissue or a cell type. EMBRY proteins are useful as immunogens for preparing antibodies. Polynucleotides of the invention are useful for creating knockin humanised animals or transgenic animals to model human diseases. They are also used in gene therapy. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents a multiple sclerosis (MS) associated retrovirus (MSRV) genomic fragment used in the method of the invention. The invention provides complete or partial genomic sequences of the MSRV-1 pol gene, gag gene and env gene, and polypeptides encoded by these genes. The invention also provides antibodies raised against the separation of sequences, polypeptides and antibodies are also claimed useful for diagnosing infection by MS and rheumatoid arthritisassociated viruses, and also for prevention and treatment of infection

The methods and compositions of the present invention are useful for diagnosing, preventing and/or treating multiple sclerosis and/or rheumatoid arthritis. The present sequence is used in the exemplification of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     421
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8
```

```
Novel human diagnostic and therapeutic polypeptide useful for identifying test compound which specifically binds to a polypeptide encoded by human diagnostic and therapeutic polynucleotide, and to induce antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to novel human diagnostic and therapeutic polynuclectides designated dithp (ACC46080-ACC46749) and to their encoded proteins (DITHP; ABR41136-ABR41812). The invention also relates to polynucleotide seguences at least 90% identical to the dithp cDNA
                                                                                                                                                                                                                                                                                                                                                                                            Human, dithp, diagnostic and therapeutic polynucleotide, diagnosis, cancer; cell proliferative disorder, autoimmune disorder; inflammatory disorder; infection; hormonal disorder; metabolic disorder; neurological disorder; gastrointestinal disorder; transport disorder; connective tissue disorder; drug screening; protecome analysis; gene therapy, antisense therapy; genotyping; transgenic animal; knock in; disease model; toxicological testing; transcript imaging; growth;

creambinant production of DITHP proteins, antibodies specific for DITHP proteins; microarrays comprising dithp nucleic acid sequences; methods of detecting dithp nucleotide and protein sequences; methods of screening for compounds which specifically bind a DITHP protein; and methods of sassessing the toxicity of test compounds using a dithp hybridisation probe. Dithp nucleic acid sequences and DITHP proteins may be used in the diagnosis of a wide variety of conditions including cancer and other cell proliferative disorders; autoimmune or inflammatory disorders; bacterial, viral, fungal or parasitic infections; hormonal disorders; metabolic cylesofers; neurological disorders; pastrointestinal disorders; transport disorders; and connective tissue disorders. They may also be used to screen for modulators of protein activity or sene expression. DITHP proteins can additionally be used in analysis of the proteome of a tissue additionally useful in somatic or germline gene therapy of the disorders and to induce antibodies. The dithp nucleic acids are additionally useful in somatic or germline gene therapy of the disorders mentioned above, as a source of antisense sequences, as a source of correct of antisense sequences, as a source of the generation of transgenic animal models of human disease or knock in the present sequence represents a dithp cDNA encoding a DITHP protein contains this patent did not form part of the printed specification, but was contained in electronic format directly from WIPO at essention, but was contained in electronic format directly.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1110
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1050

The nucleic acids comprise pol, gag or reverse transcriptase genes (or their fragments) encoding the proteins or defined peptides (including immunodominant peptides.

The including are process for arthritis in a biological sample, a nucleic acid probe for the detection arthritis in a biological sample, a nucleic acid probe for the detection of a virus associated with multiple sclerosis or rheumatoid arthritis, a polypeptide exhibiting an inhibitory activity on the protectivity on the protective and an antibody directed against the MSRV-1 virus obtained by and an antibody directed against the MSRV-1 virus obtained by immunogenic agent consisting of the antigenic polypeptide defined above.

The nucleic acids are useful for detecting a biological sample a virus associated with multiple sclerosis or rheumatoid arthritis. The present detecting in a biological sample, the presence of associated with multiple sclerosis or rheumatoid arthritis. The present consisting consisting of the antigenic polypeptide defined above.

The nucleic acids are useful for detecting a biological sample a virus associated with multiple sclerosis or rheumatoid arthritis. The present consisting in a biological sample, the presence of actually determined MSRV-associated sequences as displayed in the main body of the post incommence is a claimed MSRV-associated sequences as displayed in the main body of the presence of or exposure to a virus accurately determined. Note: The SEQ ID numbers for the sequences as displayed in the main body of the present sequences and in the sequence listing. Consequently those sequences mentioned in the harman bank and the main bank and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated or purified nucleic acid associated with multiple sclerosis and/or rheumatoid arthritis, useful for detecting a virus associated with multiple sclerosis or rheumatoid arthritis in a biological sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Tuke PW;

```
This is the human secreted protein AJ172 2 nucleotide sequence, obtained from a human adult testes CDNA library. The invention relates to secreted human and mutrine proteins. The polymocleotides and proteins are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals. Detection of the levels of the proteins can be used for the caimans. Detection of the levels of the proteins can be used for the caimans. Detection of the levels of the proteins may be used for treating a neoplastic disease and inhibiting metastasis. Other suggested activities include nutritional activity (e.g. in feeds), cytokine and activity in large sequential activity, immune stimulating activity, tissue growth activity, activin/inhibin activity, conferenceallocked activity, and tumour inhibition activity. The invasion suppressor activity, and tumour inhibition activity. The polymucleotide sequences are also stated to be useful for gene therapy

The products of the invention are predicted to have biological activities which would make them suitable for treating, preventing or sumplical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, in the semantopoiesis regulating eq. as vaccines) or suppressing activity, activity, activity, chemotactic/chemokinetic activity, activity, chemotactic/chemokinetic activity, activity, cadherin/tumour invaion suppressor activity, anti-inflammatory activity, cadherin/tumour invaion suppressor activity, and tumour inhibition activity. The polynucleotides are also stated to be useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CCCTGTATCTTTAACCTCCCTTGTTAACTTTGTCTCTTCCAGAATCGAAGCTGTAAAACTA 2382

The invention relates to a protein comprising fully defined A2302 1

protein or BD127 1 6 protein. The polynucleotides are useful for
expressing recombinant proteins for analysis and are also useful as
chromosome markers or tags to identify chromosomes or to map related
chromosome markers or tags to identify chromosomes or to map related
gouste, nitrogen source and carbohydrate source. The proteins are useful
for treating various immune deficiencies and disorders (e.g. severe
combined immunodeficiency (SCID), autoimmune disorders, inflammatory
reactions (e.g. asthma), myeloid or lymphoid cell deficiencies,
caccines (SIRS), inflammatory disease, Parkinson's disease),
cosqualation disorders, inflammatory diseases (e.g. systemic inflammatory
response syndrome (SIRS), ischaemia-reperfusion injury, Crohn's disease),
anaphylaxis and hypersensitivity. Proteins are also useful for inducing
tumour immunity, for inducing bone, cartilage, tendon, ligament and/or
nerve growth or regeneration, for proliferating neural cells and for
inhibiting tumour growth. Proteins are also useful as Chemokine for
inhibiting tumour growth. Proteins are also useful as Chemokine for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2323 CCCTGTATCTTTAACCTCCTTGTTAACTTTGTCTTCCAGAATCGAAGCTGTAAAACTA 2382

                                                                                                                                                                                                                                                                                                                                          cccrerarcritaaccrecrierraacririgicrerrecagaarcgaagcreraaacra 2216
                           protein. The specification describes a method for detecting expression of an envelope protein from a human endogenous retrovirus (HERV), in cells, of a tissue or culture. The method comprises detecting syncytia formation due to the fusogenic properties of the envelope protein. Envelope polypeptides and polynucleotides are used to produce therapeutic or prophylactic compositions, particularly for treatment of cancer, to correct defects in placental development (or other natural formation of other types of syncytia), and to promote adhesion of cells in grafts or cellular repair processes. Expression of sequences antisense to the

```

This sequence represents clone cl.C4C5 of the human endogenous retrovirus (HERV) W genome. The nucleic acids, their fragments or peptides encoded by them are markers of autoimmune disease (e.g. multiple sclerosis, theumatoid polyarthritis, disseminated lupus erythematosus, insulindependent diabetes and related pathologies) and of abnormal or unsuccessful pregnancy and can be used as chromosomal markers for susceptibility to these conditions, or proximity markers of genes

New nucleic acid sequences from human endogenous retrovirus-W - expressed exclusively in placenta and useful in diagnosis and therapy of autoimmune

disease, and abnormal or failed pregnancy

                                             fragment, which is associated with an accimmune disease, and is integrated into the human genome. The fragment is originally derived from a novel retrovirus, human endogenous retrovirus (HERV-W). The HERV-W retrovirus is associated with autoimmune disease, failure of pregnancy or disorders of pregnancy. The nucleic acid fragment, or proteins derived from it, are useful for diagnosis of autoimmune disease (specifically multiple sclerosis) and for monitoring pregnancy. The nucleic acid fragments may also be used for in situ labelling of isolated chromosomes, while the transcription product can be used to study or monitor I cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents an endogenetic retroviral nucleic acid fragment, which is associated with an autoimmune disease, and is integrated into the human genome. The fragment is originally derived from a novel retrovirus, human endogenous retrovirus W (HERV-W). The HERV-W retrovirus is associated with autoimmune disease, failure of pregnancy or disorders of pregnancy. The nucleic acid fragment, or proteins derived from it, are useful for disposis of autoimmune disease (specifically multiple sclerosis) and for monitoring pregnancy. The nucleic acid fragments may also be used for in situ labelling of isolated chromosomes, while the transcription product can be used to study or monitor T cell
                                                                                                                                                                                                                                                                                                                                           New nucleic acid from human endogenous retrovirus, useful e.g. for diagnosis of autoimmune disease and complications of pregnancy, contains

                                 This sequence represents clone cl.PH74 of the human endogenous retrovirus (HERV) W genome. The nucleic acids, their fragments or peptides encoded by them are markers of autoimmune disease (e.g. multiple sclerosis, rheumatoid polyarthritis, disseminated lupus erythematosus, insulindependent diabetes and related pathologies) and of abnormal or unsuccessful pregnancy and can be used as chromosomal markers for susceptibility to these conditions, or proximity markers of genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240
